

# **COCOA Simulation and Study of the EMU Alignment System**

**Robert Lee**

**CMS Endcap Muon Meeting  
4 October 2001**

# Simulation Status

## Description of EMU Alignment System Geometry and Components Complete

### Includes

- CSC Chamber Definition
  - < 10  $\mu\text{m}$  Agreement on ME  $\pm 1$  w/ Production Drawings
  - < 5  $\mu\text{m}$  Agreement on ME  $\pm 2$ ,  $\pm 3$ ,  $\pm 4$  w/ Prod. Drawings
- Transfer Plates
- Secondary Sensors: Inclinometers, Proximity Sensors

## Realistic Estimation of Uncertainties on CSC Construction and Strip Placement

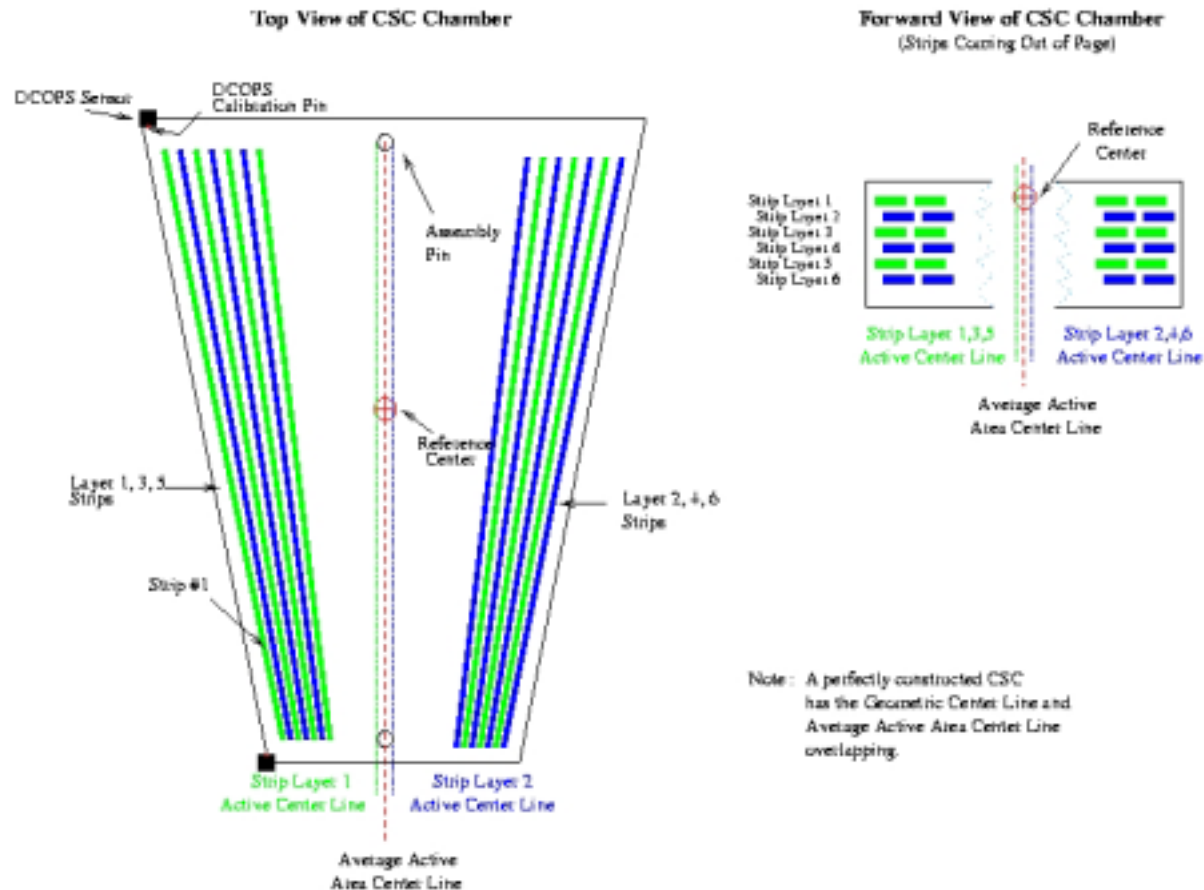

## First Estimation of System Uncertainties

# CSC Definition in COCOA

## CSC Definition:

2 DCOPS Placed Relative to the 'Reference Center' of the Chamber

# Uncertainty in DCOPS - Reference Center Relationship\*

**CSC X-Axis (Perpendicular to Centerline,  $\sim$ CMS  $R\Phi$ ) :**

Uncertainty Origin	Magnitude ( $\mu\text{m}$ )
Central Alignment Pin - Notched Alignment Marks	25
Notched Alignment Mark - Numbered Reference Strip	25
Intrinsic Strip Positioning (from milling)	30
Averaged Centerline Across 6 Assembled Planes	87
Positioning of Primary DCOPS Alignment Pins/Holes	25
Diameter of Primary DCOPS Alignment Pins/Holes	25
Placement of Mounting Plate On Chamber	50
Placement of DCOPS Mounting Plate	50
DCOPS Calibration, Construction**	65
Maximal Shearing Effect (Averaged across 6 layers, No Reliable Data?)	25

**Final Estimation of Uncertainty Along X Axis of Chamber: 144  $\mu\text{m}$**

\* Estimates based on data supplied by O. Prokofiev, N. Chester, Muon TDR, CMS Internal Notes

\*\* Estimate based on 40  $\mu\text{m}$  1<sup>st</sup> Pixel Calibration + *COPS Sensor Board Calibration, J. Moromisato et al, Oct 2000*

# Uncertainty in DCOPS - Reference Center Relationship\*

**CSC Y-Axis (CMS Z) :**

Uncertainty Origin	Magnitude ( $\mu\text{m}$ )
Panel Thickness (Maximal deviation)	508
Frame to Panel Placement	127
Mounting Bracket Chamber-Shim Standoff	100
Mounting Bracket Al. Plate	125
DCOPS Calibration, Construction**	65

**Final Estimation of Uncertainty Along Y Axis of Chamber: 551  $\mu\text{m}$**

**Uncertainties which are asymmetric are estimated as symmetric at max deviation**

**Examples: Panel Thickness Uncertainty is +508  $\mu\text{m}$  - 245  $\mu\text{m}$**

**Mounting Bracket Chamber-Shim Standoff +100  $\mu\text{m}$  - 0  $\mu\text{m}$**

**Average Sheering Effect between layers is asymmetric**

\* Estimates based on data supplied by O. Prokofiev, N. Chester, Muon TDR, CMS Internal Notes

\*\* Estimate based on 40  $\mu\text{m}$  1<sup>st</sup> Pixel Calibration + *COPS Sensor Board Calibration, J. Moromisato et al, Oct 2000*

# Other Uncertainties in the COCOA EMU Simulation

## Hardware (Transfer Plates, Z Standoffs, etc)

- Estimates from production drawings

## MAB Uncertainty

- $\pm 135\mu\text{m} \pm 30 \mu\text{rad}$  on MAB Placement
- $\pm 35\mu\text{m}$  MAB Deformation
- $\pm 50\mu\text{m} \pm 10 \mu\text{rad}$  on DCOPS Placement on MAB

## Measurement Uncertainties

- Performance of all devices set to long term, uncorrected resolutions found in 2000 ISR tests
- Secondary LINK Laser Line Uncertainty set to  $\pm 20\mu\text{m}$  and  $\pm 10 \mu\text{rad}$
- Link 2D Sensor Modeled as making  $5\mu\text{m}$  measurements

# COCOA Model of EMU Simulation

# Full EMU COCOA Simulation

**Full EMU Simulation Model has :**

- **> 19000 Lines Text in Input File**
- **> 6200 Entries to Fit**
- **> 6000x1500 Matrix Constructed for Fit**

**THIS IS A PROBLEM !!!**

- **Computer(s) Crash with error indicating problem is with memory (allocation & usage)**
- **1 iteration of ME  $\pm 2$ ,  $\pm 3$ ,  $\pm 4$ , and Transfer System with completed on System with > 1 GB RAM (with 92% memory used before I killed it)**
- **Temporary Solution is to Compare Subsets of Full System, look for correlations**

# Comparison of Subset Simulations

- All Sub-Systems Had Full Transfer Line
- Largest Sub-System has 6 ME Disks
  - ME  $\pm 2$ ,  $\pm 3$ ,  $\pm 4$  w/ Transfer System
- All Permutations of 2 ME Disks + Transfer System were examined (56 Separate Simulations)

## Conclusion :

Estimates of equal size systems are comparable

Estimates from smaller systems are comparable to estimates from larger systems

# 1<sup>st</sup> Simulation Study Results

## Uncertainty in Reconstruction of CSC Reference Center\*

	$\sigma$ CMS $R\Phi$ ( $\mu\text{m}$ )	$\sigma$ CMS $Z$ ( $\mu\text{m}$ )
<b>ME <math>\pm 1/2</math></b> ( $\sigma$ inclinometer = short term ISR)	<b>160 – 175</b> (90 95)	<b>370 – 420</b> (370 385)
<b>ME <math>\pm 1/3</math></b>	<b>210 – 225</b>	<b>670 – 880</b>
<b>ME <math>\pm 2/1, \pm 3/1, \pm 4/1</math></b>	<b>190 – 210</b>	<b>400 – 420</b>
<b>ME <math>\pm 2/2, \pm 3/2, \pm 4/2</math></b>	<b>220 – 250</b>	<b>400 – 450</b>

\* Translation to any strip position in chamber at wide end is  $<40\mu\text{m}$  in quadrature with above  $\sigma$
